Surgical Management

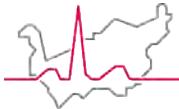

Dr Méd. Fournier Ian

Spécialiste chirurgie générale, spéc. chirurgie viscérale membre FMH

Médecin adjoint service de chirurgie générale de l'HVS

Médecin consultant service de chirurgie viscérale et transplantation des
HUG

Chargé d'enseignement à la faculté de Médecine Humaine UNIGE

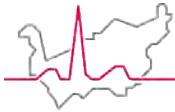

Hôpital du Valais
Spital Wallis

Introduction

- **Historical Mile Stones**
- **Indication**
 - Mainly Oncological
 - Benin lesion with local complication
- **Resectability**
 - Anatomy limits
 - Functional limits
- **Minimally invasive liver surgery**
- **MHS**

Hôpital du Valais
Spital Wallis

Historical mile stones in liver surgery

Ancient/Antic Liver Surgery limited to infectious condition

- **Ancient Egypt:**

- Medical texts, such as the Ebers Papyrus (circa 1550 BCE), mention procedures for draining abscesses in different parts of the body.

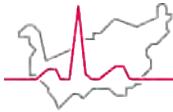

- **Ancient Greece and Rome:**

- Hippocrates and Galen, described surgical procedures for abscess drainage and wound care. However, specific reports of liver abscess drainage are rare.

- **Medieval and Islamic Medicine:**

- During the medieval period, Islamic scholars like Al-Razi (Rhazes) and Avicenna (Ibn Sina) made contributions to surgical techniques. Their works discussed abscess drainage methods but provided limited details about liver abscesses specifically.

Historical development in liver surgery

19th Century

1. Emerging anesthesia permitted further deployment
 2. Limitation in asepsia, liver function and anatomy knowledge
- **Johann Nepomuk von Ritter (Austria, 1782–1856):** performing one of the earliest documented hepatic surgeries in 1816. He attempted to ligate the hepatic artery to control bleeding in a patient with hepatic injury.

20th Century

- Dr. Evarts Graham (USA): In 1933, the earliest successful liver tumor resections.
- The 1950s saw significant advancements in anesthesia, allowing for longer and more complex surgical procedures. Improved perioperative care further reduced the risk of complications.
 - Dr. Thomas E. Starzl (USA): Often referred to as the "father of transplantation," In 1967, he performed the first successful liver transplant, paving the way for organ transplantation as a viable treatment option for end-stage liver disease.
 - Dr. Henri Bismuth (France): anatomical liver resection emphasized preserving functional liver segments.

Oncological Indication

Hôpital du Valais
Spital Wallis

- Liver Primary

- HCC (Hepatocarcinoma)
- ICCa (Intrahepatic Cholangiocarcinoma)
- PCCA (Hilar Cholangiocarcinoma)

Best Practice & Research Clinical
Gastroenterology

Liver resection for HCC: Patient's selection and controversial scenarios

François Cauchy M.D. (Fellow in Surgery)^{a b}, Olivier Soubrane M.D. (Professor of Surgery)^{a b},
Jacques Belghiti M.D. (Professor of Surgery)^{a b}

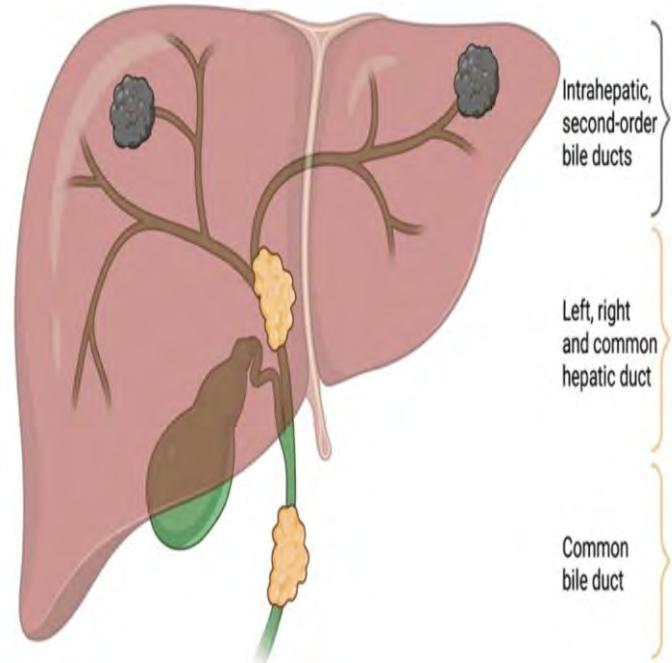

Oncological Indication

Hôpital du Valais
Spital Wallis

Liver Primary

- HCC (Hepatocarcinoma)
- ICCa (Intrahepatic Cholangiocarcinoma)
- PCCA (Hilar cholangiocarcinoma)

iCCA (ca. 10%)

Risk factors: cirrhosis, HBV, HCV, diabetes, obesity, alcohol, liver flukes, PSC

Mutations: IDH1/2, FGFR2, BAP1, KRAS, TP53, ARID1A

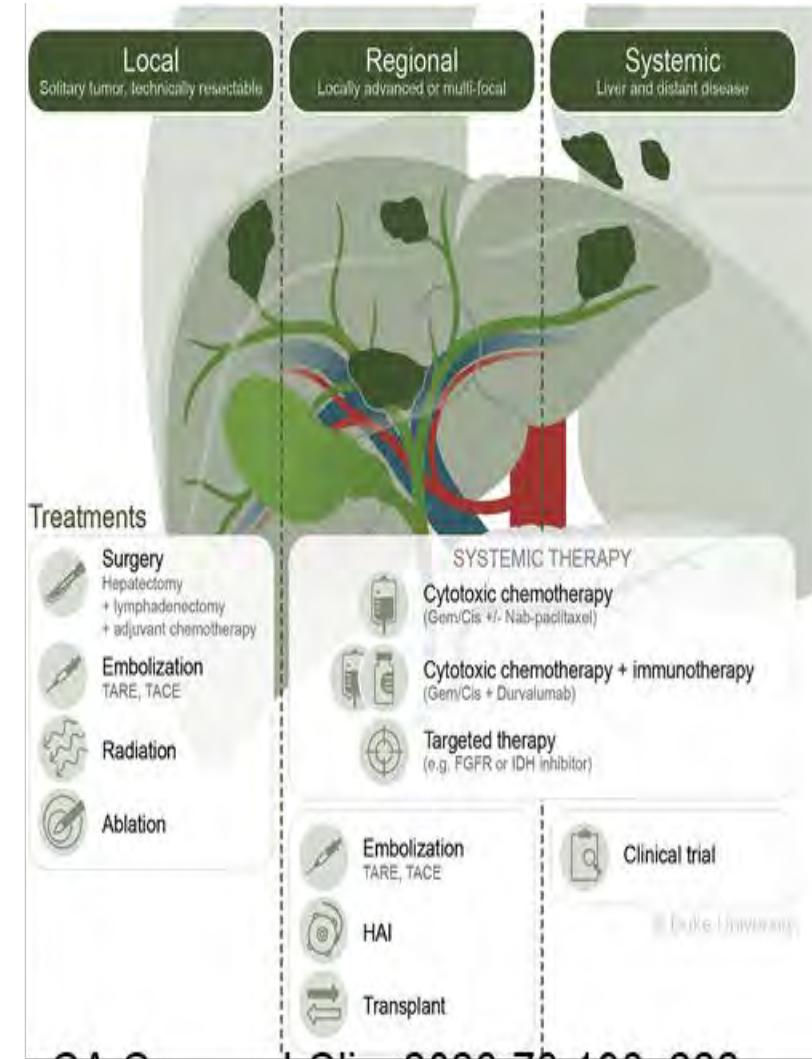

Prognosis: 15-40% 5-year survival rate following R0 resection

pCCA (50-60%) and dCCA (20-30%)

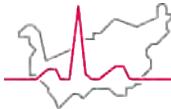

Risk factors: PSC, hepato-/cholelithiasis, liver flukes, bile-duct cysts

Mutations: PRKACA, PRKACB, ARID1A, ERBB2, KRAS, TP53, SMAD4

Prognosis: up to 40-50% 5-year survival following R0 resection

CA Cancer J Clin. 2023;73:198–222.

Surgery Strategy & Liver Geography

• Resectability

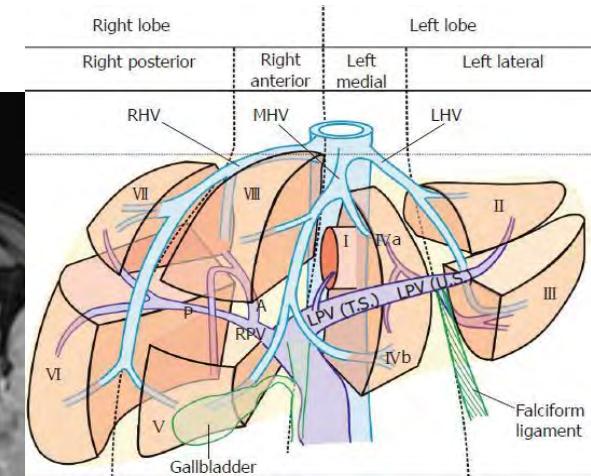

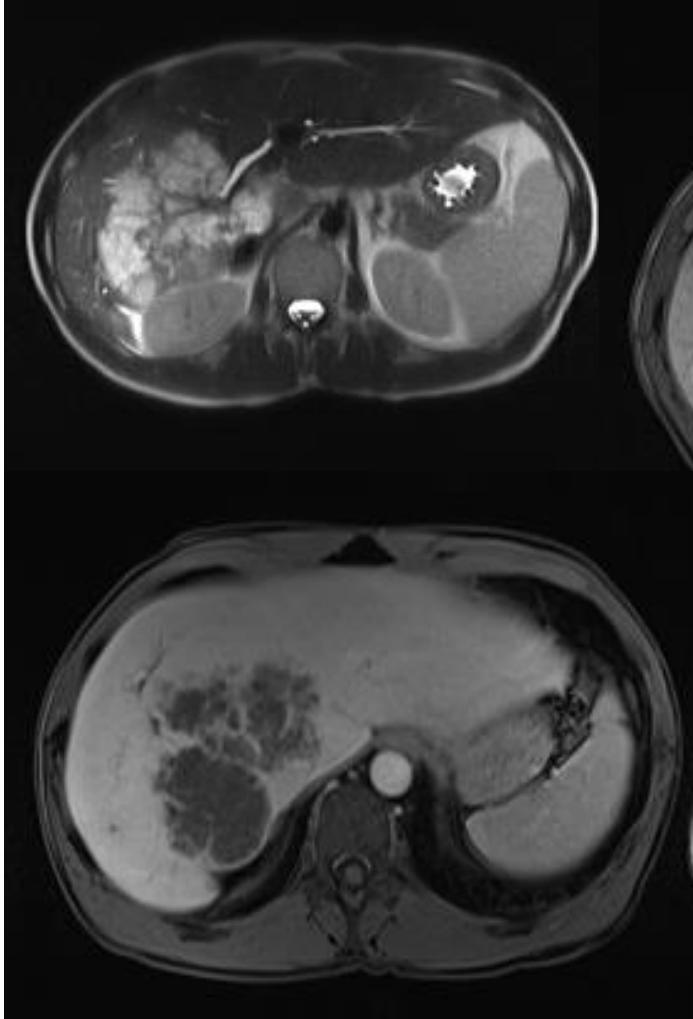

- New burden with increasing complexity of reconstruction possibility
 - Inflow supply (portal and arterial)
 - Outflow supra hepatic vein
 - Bile production
- Liver function
 - Size
 - Underlying hepatic disease (cirrhosis/SOs)

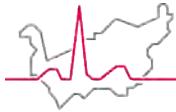

Hôpital du Valais
Spital Wallis

Surgery Strategy & Liver Geography

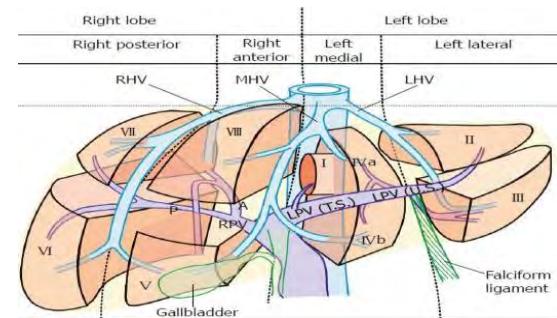

- **Metachronous liver metastasis of mucinous right colon cancer**
 - Cava contact
 - Portal encasement with compensatory hyper trophy
 - Biliary encasement

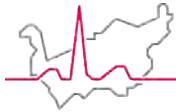

Hôpital du Valais
Spital Wallis

Surgery Strategy & Liver Geography

- **Right Extended hepatectomy**
 - Portal jumping venous graft
 - Biliodigestive hepatico jejunostomy
 - Protetrical cava graft replacement

Hôpital du Valais
Spital Wallis

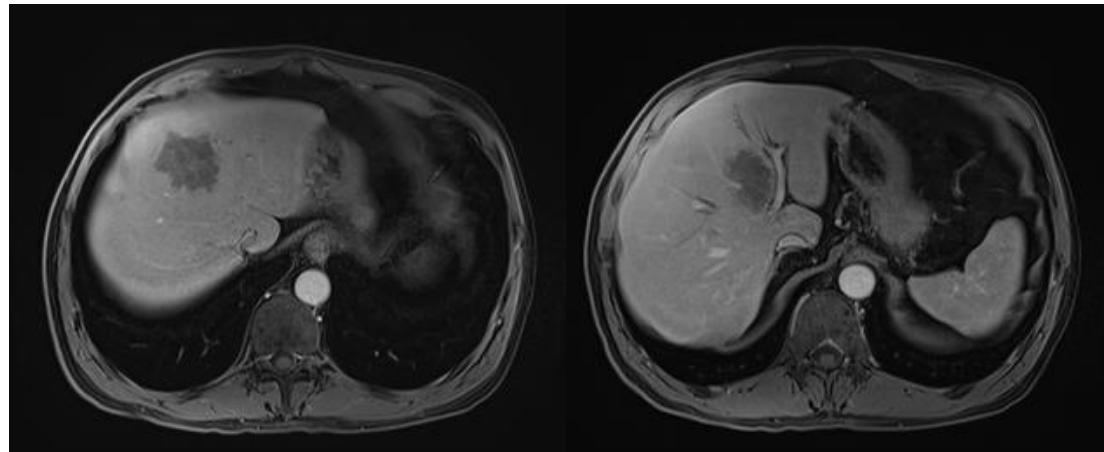

Surgery Strategy & Liver Geography

- **Resectability:**

- Anatomy

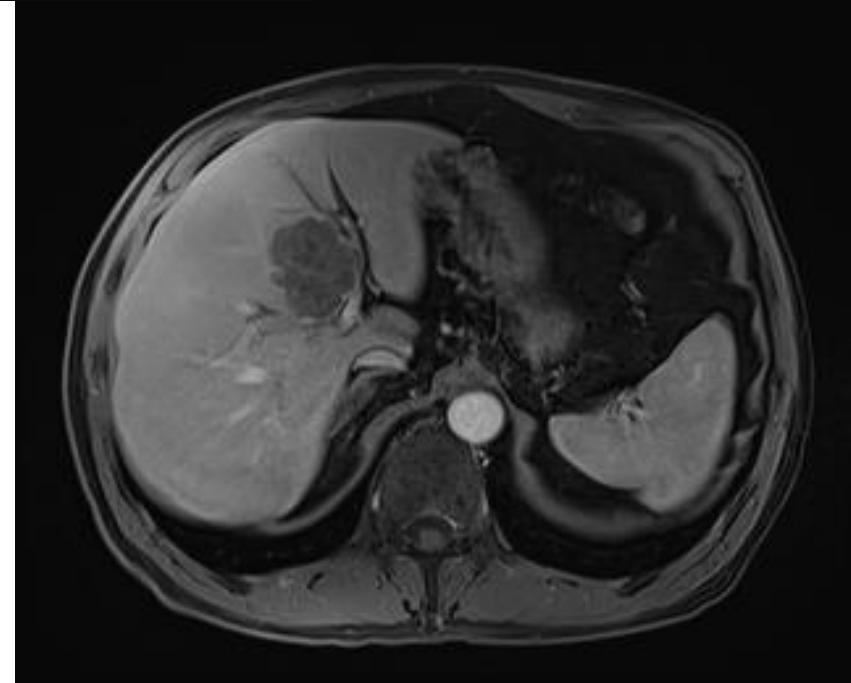

- Chemotherapy
downsizing for margin and
anatomy sparing resection

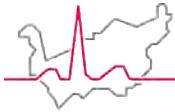

- Independent predictor
for local recurrence

- **Synchronous liver low-rectal
adenocarcinoma metastasis**

- Seg IV/V/VIII

Dealing with remnant Liver

- Indication
- Resectability

- Liver function
 - Size
 - Underlying disease
- Major resection with compensatory growth
- Parenchymal sparing /cherry picking / Swiss cheese procedure

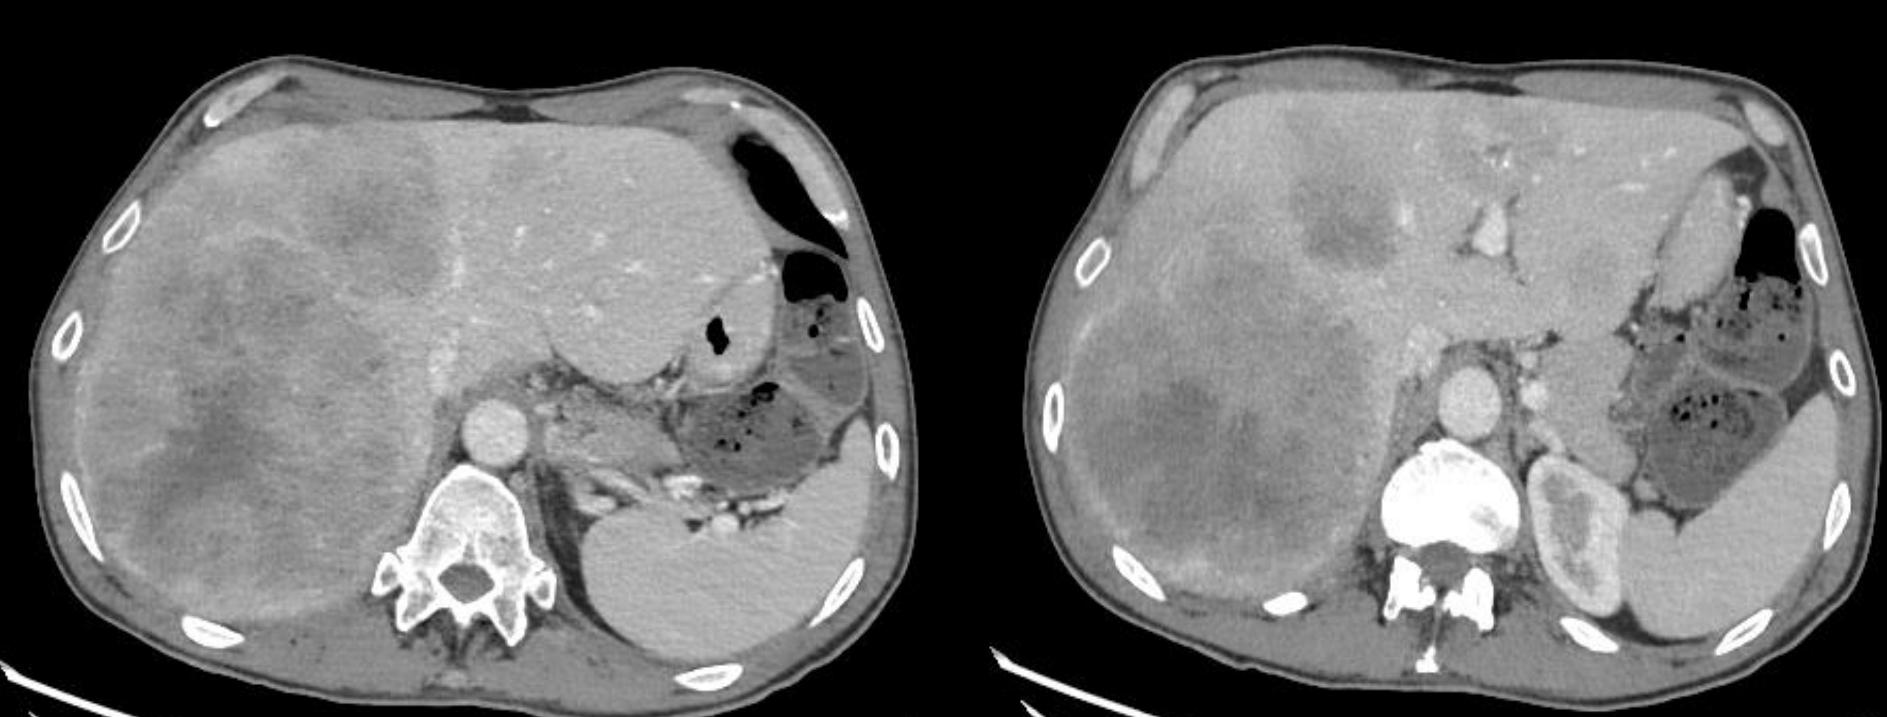

2 Step & PVE dealing with remnant liver

Hôpital du Valais
Spital Wallis

- Synchronous low rectal adenocarcinoma liver metastasis

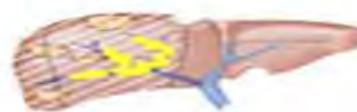

Portal Vein embolization (PVE)

Stage 1

2-7 days

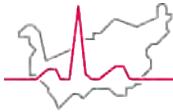

3-4 weeks

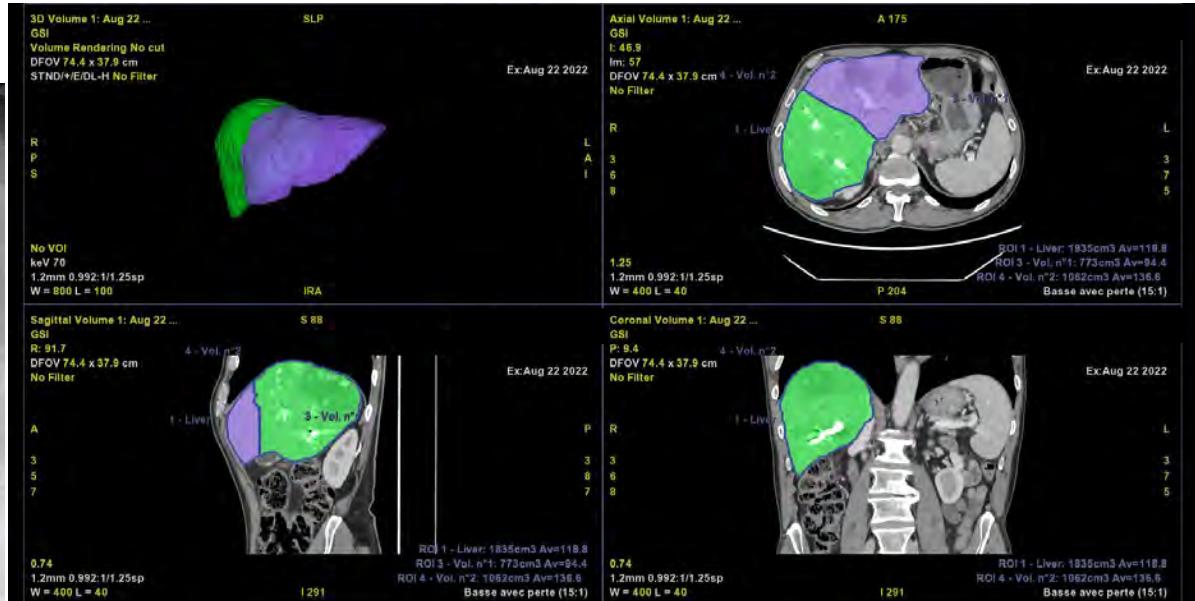

Stage 2

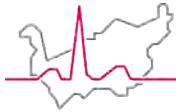

Hôpital du Valais
Spital Wallis

2 Step & PVE dealing with remnant liver

- Diagnose in 21st December 2021
- Liver end treatment 9 September 2022
- Rectum end treatment 22 October 2022
- End adjuvant chemotherapy January 2023

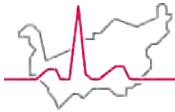

Hôpital du Valais
Spital Wallis

Cherry Picking / Swiss Cheese

- **Synchronous liver Metastasis left colon initial presentation with occlusion**

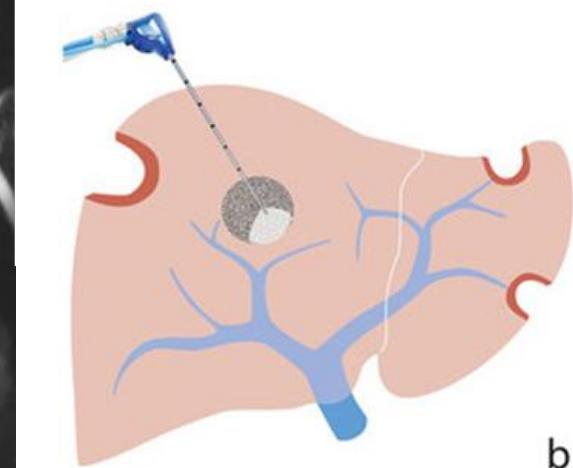

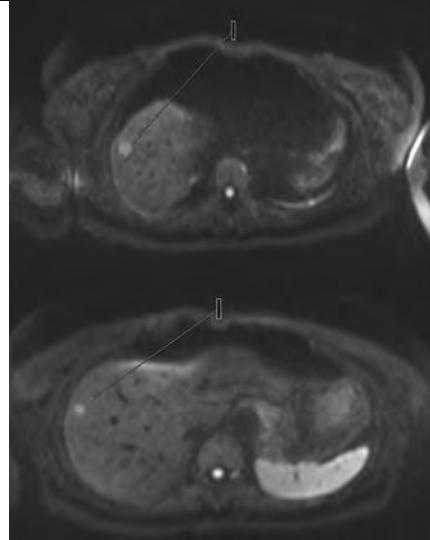

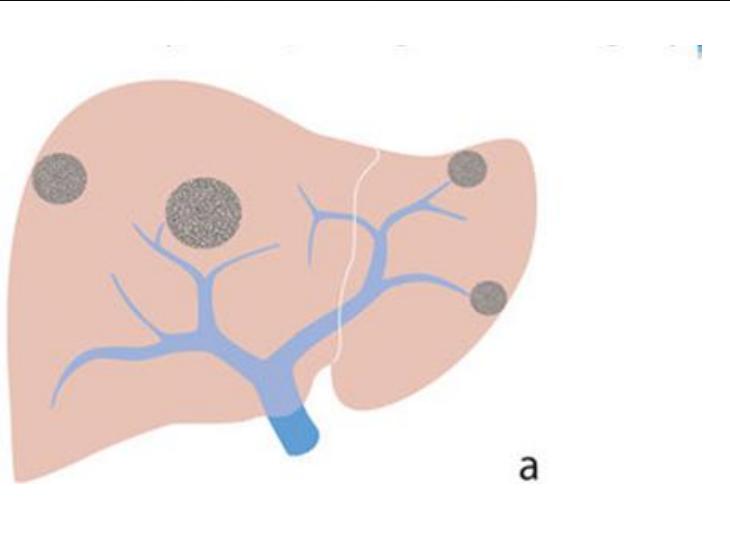

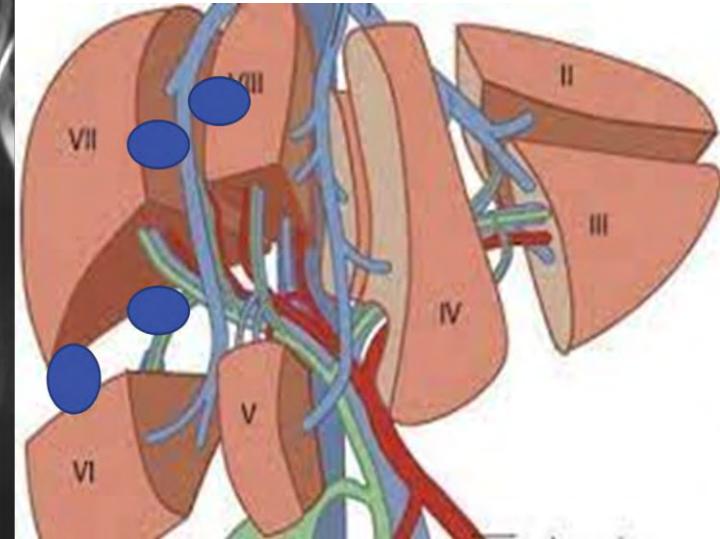

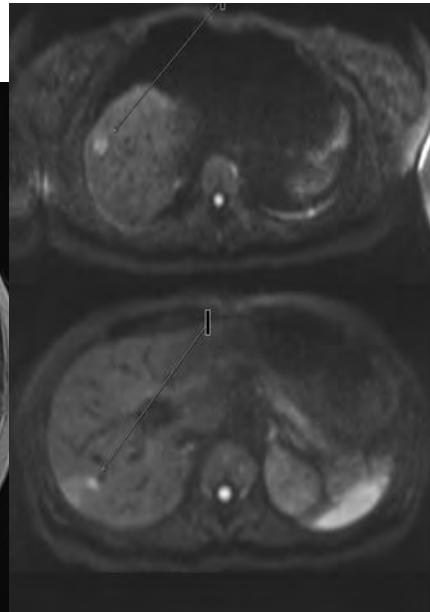

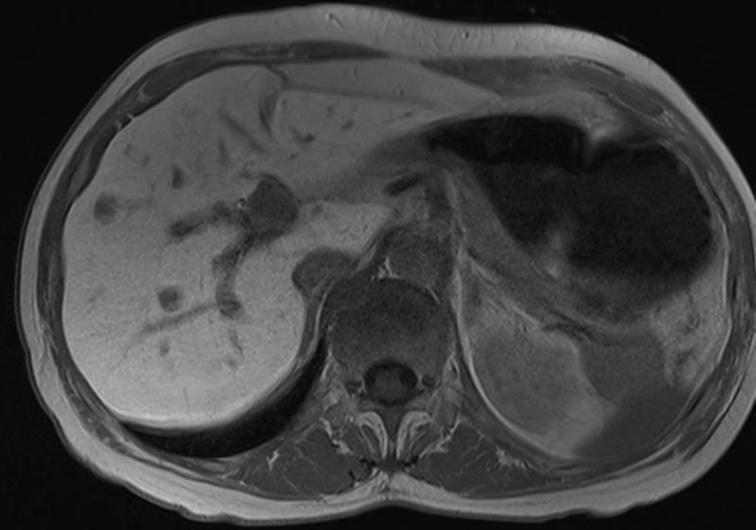

- First step restore bowel function

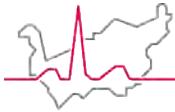

Hôpital du Valais
Spital Wallis

Cherry Picking / Swiss Cheese

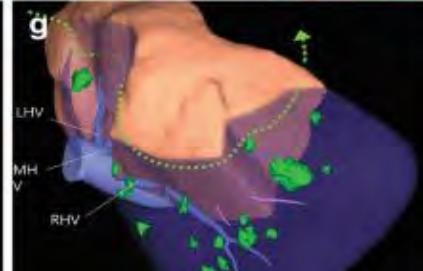

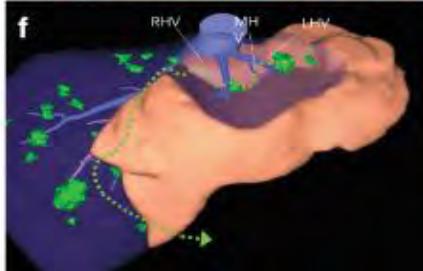

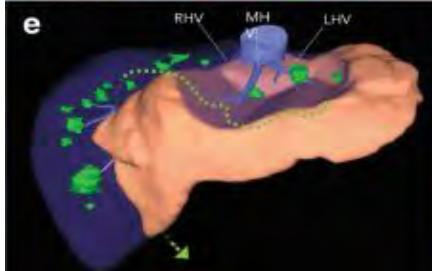

Hôpital du Valais
Spital Wallis

Cherry Picking / Swiss Cheese

• Parenchymal preserving

- Lower morbidity/ mortality
 - Small for size
- Allows simultaneous primary colon resection
- Allows more treatment possibility if liver recurrence

ELSEVIER

EJSO

European Journal of Surgical Oncology

Minimally invasive liver surgery

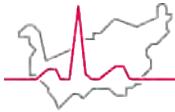

Volume 44, Issue 10, October 2018, Pages 1580-1587

Long-term oncologic results of anatomic vs. parenchyma-sparing resection for hepatocellular carcinoma.

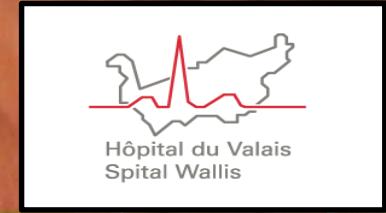

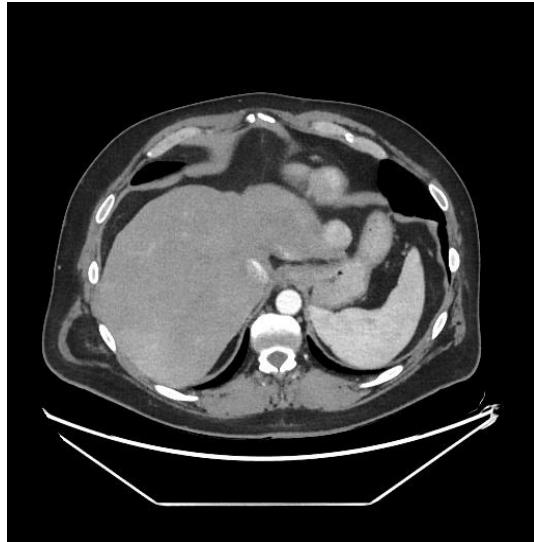

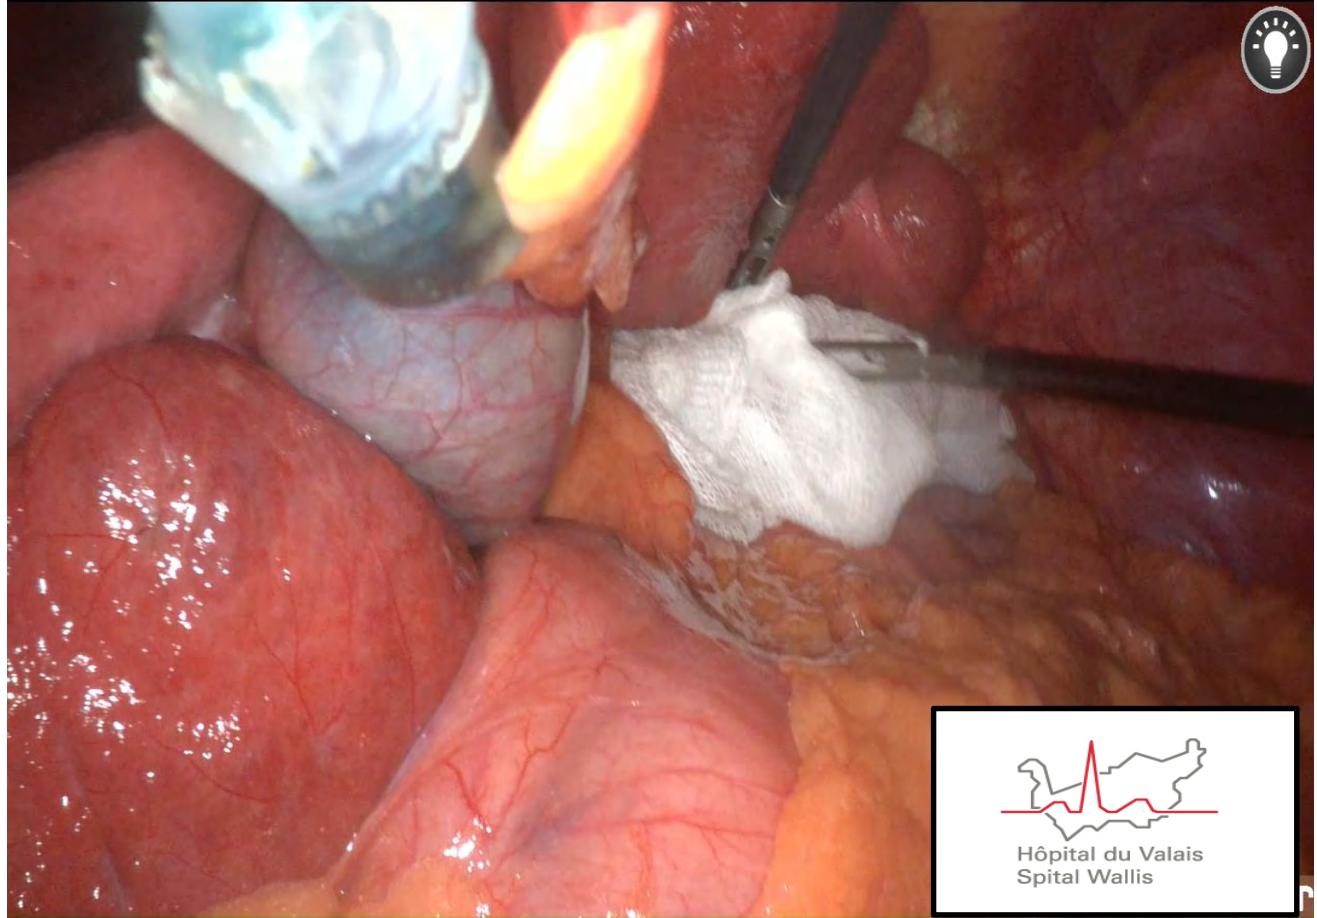

Conclusions: The extent of resection did not significantly affect overall and disease-free survival while tumor characteristics and underlying liver function appeared significant determinants

MHS Liver surgery & Geography

Hôpital du Valais
Spital Wallis

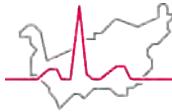

- **MHS criteria for liver surgery quite complex**

- Localization of the lesions
- Number of lesion
- Contiguous segment
- ...

- **Partnership with HUG**

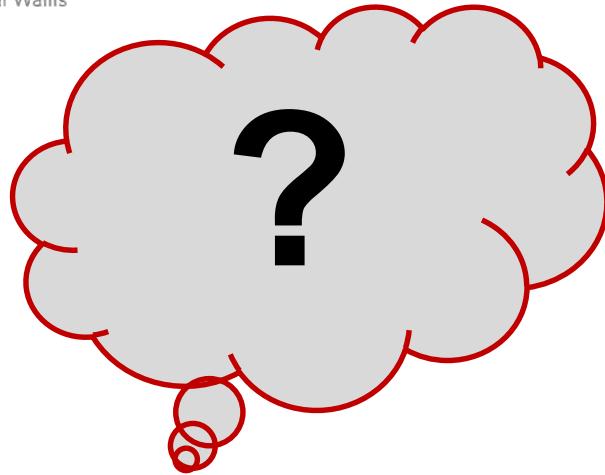

- Transplantation activity
- Dedicated team and HBP ward
- Same process
 - Pre-operative- surgery-post-operative- follow up
- Medical team/oncology and neoadjuvant treatment in Sion
- Radiological work out /Surgical & anesthesiologist consultation -> Sion
- Surgery in HUG / GVA
- Transfer post-operative if necessary
- Follow up and adjuvant treatment -> Sion
